 Google Analytics

Your usability could be better

Your page is OK but could be more usable across devices. Usability is important to maximize your available audience and minimize user bounce rates (which can indirectly affect your search engine rankings).

Device Rendering

This check visually demonstrates how your page renders on different devices. It is important that your page is optimized for mobile and tablet experiences as today the majority of web traffic comes from these sources.

Use of Mobile Viewports

Your page specifies a viewport matching the device's size, allowing it to render appropriately across devices.

Flash Used?

No Flash content has been identified on your page.

iFrames Used?

Your page appears to be using iFrames. iFrames are discouraged as they can complicate navigation of content in mobile and have historically been harder to index for search engines. There are particular coding libraries however such as Google Tag Manager that require iFrames as part of their functionality.

Favicon

Your page has specified a favicon.

Legible Font Sizes

The text on your page appears to be legible across devices.

Tap Target Sizing

Some of the links or buttons on your page may be too small for a user to easily tap on a touchscreen. Consider making these tap targets larger to provide a better user experience.

Performance Results

Your performance is good

Your page has performed well in our testing meaning it should be reasonably responsive for your users, but there is still room for improvement. Performance is important to ensure a good user experience, and reduced bounce rates (which can also indirectly affect your search engine rankings).

Page Speed Info

Your page's server response time is reasonably low which is good for load speed and user experience.

Page Size Info

Your page's file size is reasonably low which is good for Page Load Speed and user experience.

Number of Resources i

This check displays the total number of files that need to be retrieved from web servers to load your page. As a general rule, having more files to retrieve increases the number of server requests and can subsequently increase page load time. It is a good idea to removing unnecessary files or consolidate files like styles and scripts where possible.
